 Roadways (Sorted by Road Number)..... 28

Purpose

The purpose of this report is to evaluate the current Allegheny County roadway system in terms of the Commonwealth's Fuel Tax Fund allocation, discontinuity of the system, and possible roadway ownership transfer methodology. This report is a roadmap for rationalizing road ownership within Allegheny County. Implementing the recommendations of the report can be a collaborative goal and effort with partners from the Commonwealth of Pennsylvania including the Pennsylvania Department of Transportation's Central Office and (PennDOT) District 11. The report is part of the data collection and analysis for the Allegheny County Comprehensive Plan-Transportation Element.

County-Owned Roadway System

Allegheny County is responsible for maintaining 800 lane miles of roadway, which puts Allegheny County in a unique position of maintaining more lane miles of road than all the other counties combined in Pennsylvania. Figure 1 on the following page, illustrates the Allegheny County-owned road system.

Within Allegheny County, there are a total of 1197 bridges, 20 feet or more in length. Of those bridges PennDOT owns 804, the County owns 174, local municipalities, and the City of Pittsburgh, own 186. Other entities, such as the Port Authority Allegheny County, own 33. Allegheny County also owns and maintains another 346 bridges less than 20 feet in length, for a total responsibility of 520 bridges throughout the County.

The following major river bridges are maintained by Allegheny County:

- Mansfield Bridge
- Homestead Grays Bridge
- Rankin Bridge
- Glenwood Bridge*
- Rachel Carson Bridge (Ninth Street)
- Andy Warhol Bridge (Seventh Street)
- Roberto Clemente Bridge (Sixth Street)
- Sixteenth Street Bridge
- South Tenth Street Bridge

*The Glenwood Bridge is primarily owned by Allegheny County. However PennDOT owns the pavement and the City of Pittsburgh owns the sidewalks. The bridge is jointly maintained by all. It is typical for Pennsylvania counties to own bridges. It is **atypical** for the counties to own major bridges.

Dan Onorato
Allegheny County Executive

As seen in Figure 1, in numerous locations throughout the County-owned system ownership is discontinuous. This discontinuity can result in inefficiencies in snow removal and general maintenance. An example is Imperial and Burgettstown Road at Robinson Road near Imperial, PA. This 1.6 mile road segment is owned and maintained by the County; however, there are no other county-owned and maintained roadways within several miles of this area.

There are many areas where the county maintains a number of roadways in a continuous pattern. The most obvious is the county park roadway system. It is typical for Pennsylvania counties to own the roads in their county parks. It is **atypical** for them to own any other roads.

Allegheny County owns and maintains a wide range of roadways without regard to functional classification and Average Daily Traffic (ADT). The functional classification of county-owned roadways includes Other Principal Arterials, Minor Arterials, Collectors, Local Roads and Park Drives. The ADT ranges from a high of over 60,000 (the Rankin Bridge) to roadways carrying only few hundred vehicles per day. The average ADT is 8,500 vehicles per day and the median ADT for the County system is 6,900 vehicles per day. Appendix 2 lists traffic counts collected by Public Works on various road segments in the County system.

The fact that the County owns roads and bridges, which would normally be owned by the State, (and therefore would be shepherded through the road and bridge condition analysis and funding process by the State,) has ramifications related to TIP funds and State Bridge Bill funds. The State allocates State and Federal funds for infrastructure to each region, based on TIP formulas. The formulas do not deliver funds to major roads and bridges owned by Allegheny County, in the same manner as if they were owned by the State. The total funds come to SPC, with targeted amounts allotted to each of three PennDOT districts. However, no targeted amounts are permitted as set-asides for major county roads or bridges. Therefore, County-owned roads, that would normally be owned by the State, effectively become “less equal” when funds are designated to projects. It should be noted that facilities that should be state-owned would, if they were actually state-owned, be part of a system of similar state facilities and therefore would be prioritized within their proper class and category. Those projects would likely move more effectively through the maintenance/reconstruction process if they belonged to the most logical entity. Under the current situation all entities involved cooperate well, within the parameters in which they must function. But, when the larger agency lists priorities, and the smaller agency’s projects get tacked on at the end, even though they are of equal magnitude and importance, dependence on the compassion of the larger agency to “do the right thing”, replaces a logical system in which priorities are determined as a whole by the facility owner.

Commonwealth County Liquid Fuel Tax Allocation

The Commonwealth of Pennsylvania provides funds to each county for the construction, maintenance and repair of county roads and bridges through the Liquid Fuels Tax Act of 1931. This act provides all counties with semi-annual allocations in June and December of each year. The Act also allows the counties to allocate monies from this fund to their political sub-divisions for these same purposes

The county receives funding based on a formula established in the Act. The Commonwealth allocates one-half cent of the tax collected on each gallon of liquid fuels for distribution to the counties. The allocation formula is based on the ratio of a county's average gas consumption **in the years 1927, 1928, and 1929** to the total statewide consumption in those long ago years. The allocations are calculated semi-annually based on actual revenues as certified by the Department of Revenue and distributed by the Bureau of Municipal Services to the counties in June and December. As reported in the last published audit report by the Commonwealth's Auditor General's Office, Allegheny County received \$4,532,221.58 for the year ending 2005 under the Liquid Fuels Tax Act of 1931.

The Commonwealth also allocates liquid fuel tax revenue for roadway construction, maintenance and repair to the municipalities under a different act and formula. These funds go to local municipalities, but do not flow to Allegheny County. This act (The Liquid Fuels Tax Act 655 dated 1955, and as amended) allocates funds to municipalities, and is based on the ratios of mileage and population of the municipality to the state totals. That is, 50% of the funds are distributed based on a municipality's proportion of local road mileage to the total local road mileage in the state, and 50% on the proportion of a municipality's population to the total population of the state.

Equity Issues with the Allocation Formula

As stated above, County allocations are based on the ratio of a county's average gas consumption in the years 1927, 1928, and 1929 to the total statewide consumption in those years. There are several equity issues pertaining to this allocation:

- The ratio currently being used **is based on consumption rate calculated 80 years ago**. Because of demographic shifts, fuel usage and other factors, a current day ratio is likely to be dramatically different.
- The county allocation system does not consider the size of the roadway system the counties are responsible for. This is contrary to the municipal fuel tax allocation system, which considers the mileage of local municipality maintained roadways.

-
- The county allocation system also does not consider the magnitude of the roadway system. Allegheny County maintains nine major bridges and many high volume roadways. This is not taken into consideration in the current allocation system.

Recommendations

Based upon the information collected and analyzed above, along with discussions with Allegheny Public Works and Department of Economic Development staff, the following recommendations have been developed.

County Fuel Tax Allocation from the Commonwealth

The County should encourage the Commonwealth to revisit the allocation formula for liquid fuel tax revenue to the counties. The current formula is based upon ratios developed 80 years ago and does not take into account the size and magnitude of Allegheny County's roadway system. A system based upon miles of roadway, lane miles of roadway, bridge deck area and/or Average Daily Traffic would provide a more equitable allocation system.

Possible Efficiencies via Shared Snow Removal Agreements

Some of the County's roadway system is fragmented, leading to potential inefficiencies in snow removal. The County currently has agreements with some municipalities and PennDOT to share snow removal responsibilities on certain roadways. All involved entities share in cost efficiencies under this type of agreement. The agreements include, but are not limited to, either reimbursement for services or the transfer of certain roadway snow removal responsibilities between the County and the municipality / PennDOT. This program should be reviewed and expanded when possible in the future.

Potential Ownership Transfers between the County and the State

As stated earlier, Allegheny County maintains more lane miles of road than all other counties in the Commonwealth combined. Although a formal process does not exist for ownership transfers, it is recommended the County enter into discussions with the State on the transfer of high functional classified / high volume roadways and bridges from the County to PennDOT. Simultaneously, discussion to transfer some appropriate lower functional classified /lower volume roadways and bridges from PennDOT to the County would likely occur. But, the process cannot become an exact trade-off, as has been insisted upon in the past. It needs to be based upon an empirical rationale of which entity should in

fact be responsible for each facility. Essentially, this is an achievable good government initiative.

For the purpose of this report, a possible methodology for determining which roadways and bridges should logically be transferred has been developed. One method of many to determine most logical road ownership, either State or County, within the county boundary is to use the Federal Functional Classification System as a guide.

If the functional classification system is used as a guide, this proposal assumes the State will maintain, at a minimum, all Interstate Highways, Other Freeways and Expressways, Other Principal Arterial Highways and Minor Arterials outside the boundaries of the City of Pittsburgh. In addition, the assumption is made that the State will maintain all of the major highway river crossings within these functional classifications whether inside or outside of the City of Pittsburgh limits. With the current road ownership patterns in Allegheny County, the State currently owns highways in all functional classifications including local roads.

Under this proposal, Allegheny County roadways would then consist of a combination of Urban Collector or Rural Major Collectors, Rural Minor Collectors and Local Roads. These same roadway classifications could also be owned by the City of Pittsburgh or local municipalities, as appropriate.

If the State were to own and maintain all of the Principal Arterial Highways and major highway river crossings within Allegheny County then the following County-owned roads and bridges should be considered for transfer to the State:

1. Three Degree Road and Babcock Boulevard from Route 19 to McKnight Road (0.97 miles)
2. Camp Horne Road from Route 65 to I-279 (2.03miles)
3. Browns Hill Road from Beechwood Boulevard to Homestead Grays Br (.71 miles)
4. Monroeville Trestle Road from Route 380 to Northern Pike (3.64 miles)
5. Fifth Avenue from Route 30 to Wall Avenue (1.25 miles)
6. Becks Run Road from Route 837 to Brownsville Road (2.54 miles)
7. Vanadium, Bower Hill and Painters Run Roads from Route 50 to Gilkeson Road (3.04 miles)
8. Grand Avenue from Route 51 (Coraopolis) to Route 51 (Stowe) (4.23 miles)
9. Steuben Street within Crafton (0.54 miles)
10. Business Route 60 from South of Ewing Interchange to South of Cargo Interchange (3.5 miles)
11. Mansfield Bridge
12. Homestead Grays Bridge
13. Rankin Bridge
14. Glenwood Bridge

This method of determining ownership would result in a total miles transfer (excluding bridges) of 22.45 miles.

If this process is taken one step further and county roads and bridges which are on Minor Arterials are transferred to the State, then the following high volume roads (over 10,000 ADT) and bridges should be considered for transfer:

15. Sixteenth Street Bridge
16. Rachel Carson Bridge
17. Andy Warhol Bridge
18. Roberto Clemente Bridge
19. Patton Street Bridge
20. South Tenth Street Bridge
21. Windgap Bridge
22. Brandt School Road and Highland Road from Route 19 to Route 910 (4.51 miles)
23. Babcock Boulevard from Rochester Road to Three Degree Road (2.29miles)
24. Babcock Boulevard from McKnight Road to Duncan Avenue (0.79 miles)
25. Fox Chapel Road from Old Route 28 (Freeport Road) to Delafield Road (0.80 miles)
26. Delafield Road from Fox Chapel Road to Route 28 (0.86 miles)
27. Thompson Run Road from Babcock Boulevard to Duncan Avenue (4.20 miles)
28. Vilsack Road from Thompson Run Road to Mount Royal Boulevard (1.25 miles)
29. Haymaker Road from Route 48 to Route 130 (3.03 miles)
30. Monroeville Boulevard from Northern Pike to James Street (2.17 miles)
31. Universal Road from Rodi Road to Route 380 (4.28 miles)
32. Hartman Street from Route 148 to Route 148 (2.45 miles)
33. O'Neil Boulevard from Route 148 to Hartman Street (1.05 miles)
34. Bethel Church Road from Route 88 to McMurray Road (2.59 miles)
35. Fort Couch Road from Bethel Church Road to Route 19 (0.84 miles)
36. Brownsville Road from Route 51 to Curry Hollow Road (2.48 miles)
37. Provost Road from Weyman Road to Brownsville Road (1.07 miles)
38. McNeilly Road from Route 88 to West Liberty Avenue (1.83 miles)
39. Lebanon Church Road from Buttermilk Hollow to Pittsburgh McKeesport Boulevard (1.11 miles)
40. Clever Road from Beaver Grade Road to Fairhaven Road (3.33 miles)
41. Fairhaven Road from Clever Road to McKees Rocks & Forest Grove Road (0.40 miles)
42. Campbells Run Road from Main Street to Route 60 (4.47 miles)

-
-
43. McMonagle Avenue from Greentree Road to Banksville Road (0.74 miles)
 44. McKees Rocks Forest Grove Road from Middletown & Coraopolis Road to Singer Road (2.10 miles)
 45. McKees Rocks and Steubenville Pike Road from Clever Road to Heckle Road (0.4 miles)
 46. Bower Hill Road from Route 19 to McLaughlin Run Road (2.21 miles)

Utilizing this method would result in a total miles transfer (excluding bridges) of 51.25 miles. These 46 roadways and bridges are listed and mapped in **Appendix 1** of this report.

It is assumed that if all, or some, of the above listed County roads and bridges are transferred to the State then some State roads classified lower than Minor Arterials would be transferred to the County. An agreement would need to be reached between the two parties on how that would be determined. It could be partially based on equivalent mileages, but if that method does not achieve the desired result of rationalized road ownership, it should **not** limit the transfers.

If the above list is expanded to include Minor Arterials with ADT between 7,500 and 10,000 then an additional 29.73 miles of County roadways would be transferred to the State. There are approximately 175.5 miles of County owned Minor Arterials with ADT below 7,500.

This scenario is a sample of what would result if road classification is used as a basis for road ownership. Even if the proposal is carried through to only include transferring all Principal Arterial Highways to state ownership along with a few higher priority Minor Arterials, the County will assume ownership of more miles of lesser traveled roadways and it will be relieved of the maintenance of major bridges and higher ADT roads.

Obviously, there are many reasons that can be dredged-up to prevent achievement of the goal to have rational road ownership. And, the process will take some time and effort to achieve. But, the parochial barriers that prevented this achievement in the past, should be overcome in favor of good government practices and intergovernmental cooperation.

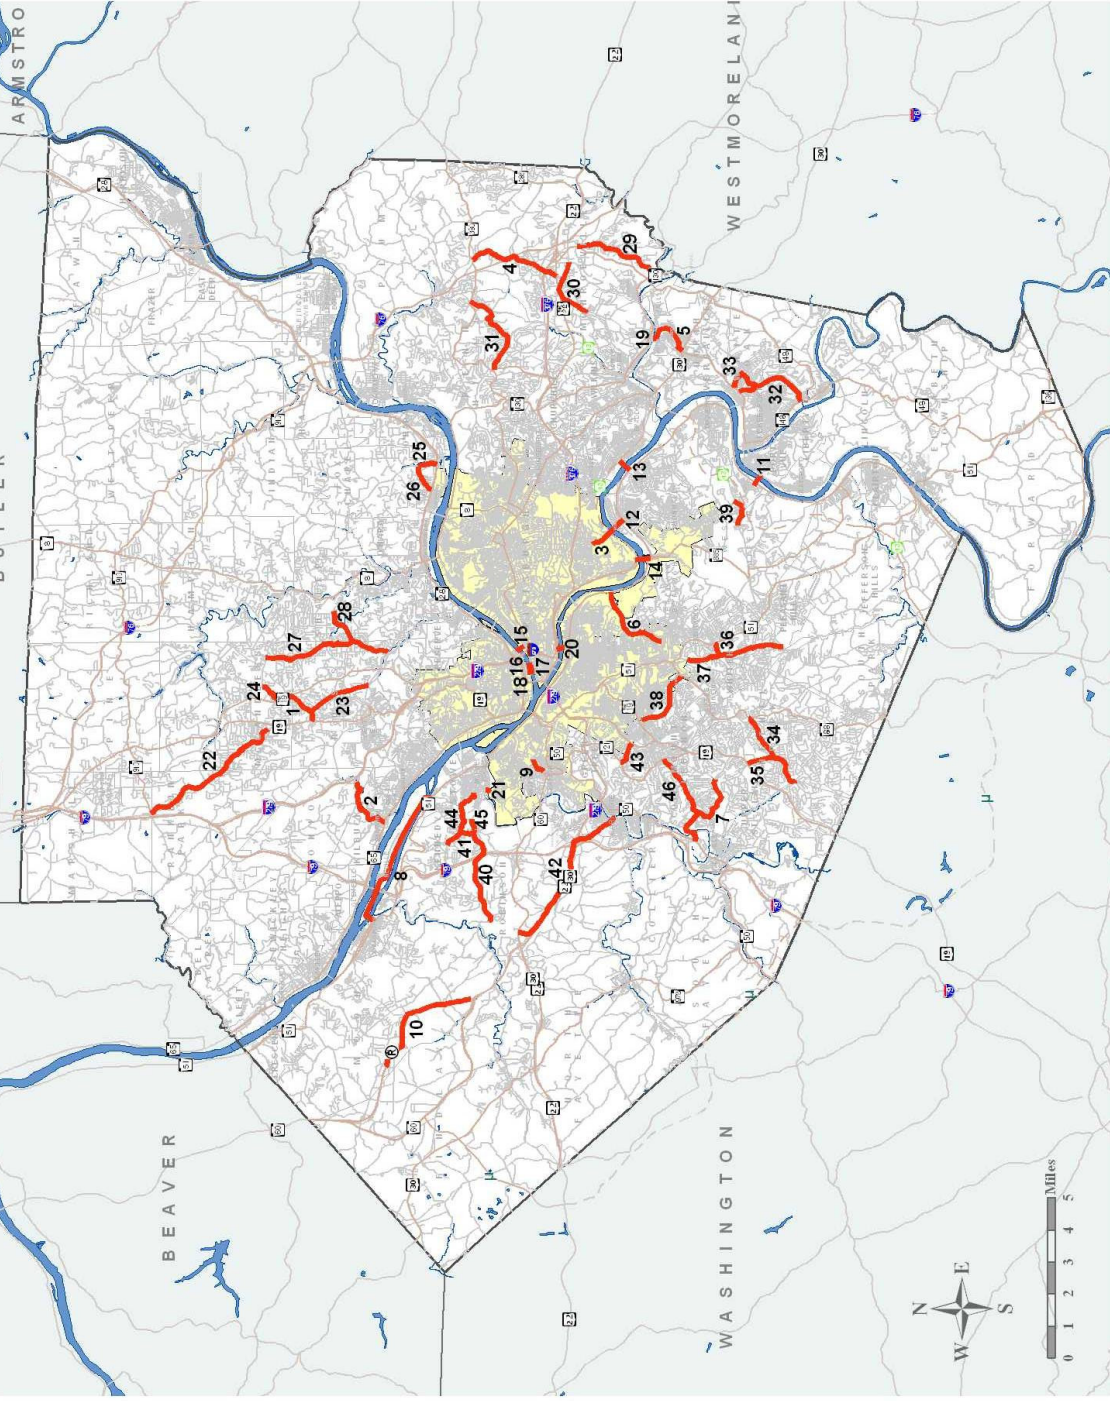

Appendix 1: Proposed Road /Bridge Ownership Transfer Listing and Map

<i>Road Number</i>	<i>Road Description</i>
1	Three Degree Road and Babcock Boulevard from Route 19 to McKnight Road (0.97 miles)
2	Camp Horne Road from Route 65 to I-279 (2.03miles)
3	Browns Hill Road from Beechwood Boulevard to Homestead Grays Bridge (0.71 miles)
4	Monroeville Trestle Road from Route 380 to Northern Pike (3.64 miles)
5	Fifth Avenue from Route 30 to Wall Avenue (1.25 miles)
6	Becks Run Road from Route 837 to Brownsville Road (2.54 miles)
7	Vanadium, Bower Hill and Painters Run Roads from Route 50 to Gilkeson Road (3.04 miles)
8	Grand Avenue and Neville Road from Route 51 (Coraopolis) to Route 51 (Stowe) (4.23 miles)
9	Steuben Street from Noble Avenue to Middleton Road (0.54 miles)
10	Business Route 60 from South of Ewing Interchange to South of Cargo Interchange (3.5 miles)
11	Mansfield Bridge
12	Homestead Grays Bridge
13	Rankin Bridge
14	Glenwood Bridge
15	Sixteenth Street Bridge
16	Rachel Carson Bridge
17	Andy Warhol Bridge
18	Roberto Clemente Bridge
19	Patton Street Bridge
20	South Tenth Street Bridge
21	Windgap Bridge
22	Brandt School Road and Highland Road from Old Perry Highway to Route 910 (4.51 miles)
23	Babcock Boulevard from Rochester Road to Three Degree Road (2.29 miles)
24	Babcock Boulevard from McKnight Road to Duncan Avenue (0.79 miles)
25	Fox Chapel Road from Old Route 28 (Freeport Road) to Delafield Road (0.80 miles)
26	Delafield Road from Fox Chapel Road to Route 28 (0.86 miles)
